Bug: Next page not working

Hello Community,

on the intersystems-data-platform-blog group as well as the developer-community-feedback group are more articles referenced than shown on the first page. But it is not possible to see further articles when going to the next page. After the click the page shows 'no content found' and the back button does not work anymore.

This behaviour can be tricked adding '?page=1' after the url. On the main page community.intersystems.com the next page buttons work.

Thanks,
Thomas
