Developer Community email notification subscriptions

Hi, Community!

Today there are two main settings for your email notification subscriptions.

1. Subscribe to all new posts, all comments, all answers

You can do it in your subscription settings in the Content Types. Click on My Account, go to Subscriptions and click on Content types tab:

Overview	Pages/Threads	Content types	Categories
----------	---------------	----------------------	------------

Current subscriptions:

<input checked="" type="checkbox"/> Subscription	On updates	On comments
---	-------------------	--------------------

<input checked="" type="checkbox"/> Answer	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--	--------------------------	-------------------------------------

<input checked="" type="checkbox"/> Post	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--	--------------------------	-------------------------------------

The master checkboxes in the left-most column turn the given subscription on or off. To turn a range of subscriptions on or off, click and Shift-click. Depending on the setup of the site, you may have additional options for active subscriptions.

In this case, you'll get only one notification for every new article or question posted on DC and every answer and comment if you checked this option.

Here are some recipes with this option.

1. Receive all the new posts notifications (without answers and comments in it):

Turn on Post checkbox.

2. Receive all the new posts, answers and comments notifications (literally to get everything):

Turn on Post, Answer and On comments in Post and Answer.

2. Subscribe to the group or tag notification

You can click on the tag in tag cloud, or in the post, or in the Tag browser in the left menu and subscribe to it.

F.e. if I click on [Caché tag](#) I can see email link to subscribe to this tag.

Caché

most active most votes new unanswered all

Subscribe to **Caché** content with RSS  or **email**

? More information regarding a SQL's ROWSPEC, especially the OptionalDescription new

Caché, SQL

I am trying to understand the concept of ROWSPEC used in Basic Class Queries and Custom Class Queries.

Following is a brief screen-shot of the documentation about ROWSPEC.

Improve SQL Performance for Date Range Queries new

Caché, Code snippet, SQL

Date range queries going too slow for you? SQL Performance got you down? I have one weird trick that might just help you out! (SQL Developers hate this!)*

Later you can customize your tag subscriptions in the same Categories tab of Subscriptions.

Overview Pages/Threads Content types **Categories**

Current subscriptions:

Post type

☒ **Subscription**

☒ Article

☒ Question

Tags

☒ **Subscription**

☒ Caché

This is a restricted category group; deactivated subscriptions will be removed from the list. To subscribe to an unlisted category, go to a post in that category and subscribe from there.

Groups have similar rules of notifications.

Just pick a [group](#), subscribe and you can unsubscribe in the Categories tab.

3. Post subscriptions

Of course, you can subscribe to any post you are interested in and get all the notifications regarding any changes in this posts:

- new answer,
- new comment,
- post update.

To turn on the subscription, just click on the star in the left corner of the post to make it favorite and subscribe to it.

And you are automatically subscribed to your own postings and to the posts where you leave the answer or comment.

To manage all the current posts subscriptions open Subscriptions menu and go to Pages/Threads tab or Favorites on your member's page.

4. Subscribe for Member postings

You can Follow the member to subscribe to all the postings this member is doing: posts, answers or comments.

E.g. I'm following [Kyle Baxter](#) so I'm getting the notifications on all his postings.

You can manage your followings on your member's page (like on [my one](#)). And you can see who is [following you](#) as well.
