Use of \$ZUTIL(49) is deprecated

Hi all,

I'm using \$ZUTIL(49) to get information of the databases I want to add to a mirror. This information is passed to `##class(SYS.Mirror).CatchupDB(plstPathDatabases)` in order to Catchup all databases addres to a Mirror.

I know that ZUTIL is deprecated and I'd like to know what function or functions I have to use in order to get all necessary information for CatchupDB.

Thanks a lot
