how to connect to the Cache database from node.js ?

I cannot connect to Cache from node.js

I have installed in Windows 10 the following: CACHE 2016, node.js v 4.4.7 and express .

- where can I get cache.node? The link in the Intersystmes documentation <http://globalsdb.org/downloads/> doesn't work. I found cache0100.node and cache0120.node in my Cache instance's `bin` directory. But I am not sure if I can use them or not.

- how to install cache.node ? Where do I place it exactly?

Can anyone recommend any tutorial or code example with installation instructions?

Thank you!
