UDL highlighting in Atom text editor

Hello, guys.

We have recently created a syntax highlighting for COS for Atom text editor. You can find it on https://github.com/intersystems-ru/atom-language-cos

Installation:

1. Download or clone this repository
2. Copy everything to /.atom/packages/
3. If you have your Atom editor open, then you need to reload it (enter Window: Reload in Command line)

It's been few days since the release, so please if you find a bug, let us know through creating an issue or forking and making a pull request.

P.S. After it gets more or less usable, we will use this syntax as a basis for GitHub highlighting for COS.
