Where to find cache.node globals download?

[Using Node.js with Caché - Introduction](#) says the following:

The [cache.node](#) module is the Node.js interface for the GlobalsDB kit, which can be obtained from the GlobalsDB download page (<http://globalsdb.org/downloads/>). The Node.js interface can be used with either Caché or the free GlobalsDB database.

The installation kit includes detailed documentation on how to install and configure the cache.node module.

However, <http://globalsdb.org/downloads> gives a 404 and <http://globalsdb.org> just redirects to intersystems.com

Where can I find the files I need?

[#Caché](#) [#Globals](#) [#Interoperability](#) [#Node.js](#)
