$fromJSON and MAXSTRING

Hi, all.
I have CSP application and it needs to get and process data from ajax request with json-content. JSON can be very big.
In this case:

```
 TRY
 {
 Set RequestObj = ##class(%Object).$fromJSON(%request.Content.Read())
 } CATCH(Exception) {
 Set Status=Exception.AsStatus()
 }
```

I get just part of getting JSON and validate error in $fromJSON.
If I try to read it all in cycle:

```
 TRY
 {
 While (%request.ContentAtEnd = 0) {
 Set Data=Data_%request.Content.Read()
 }
 Set RequestObj = ##class(%Object).$fromJSON(Data)
 } CATCH(Exception) {
 Set Status=Exception.AsStatus()
 }
```

I get error.
Increasing of MaxLocalLengt isn't solution.
Is there some good way parse big JSON?

#Caché #JSON #CSP
