## FHIR outside of HealthShare

Some time ago, I was started to work at a new company even in other country, and more important in a different sphere when I have not been worked before, in HealthCare. It's a very new project even for company. Since I have not experience in HealthCare, I looked at what I can use in my project, and found that I should not reinvent the bicycle, and think about how to store all my data which I need and how to get access to this data. And I can use FHIR, which is looks like everything what I need, what else I need it's just a client. But unfortunately I've also found that even InterSystems have worked on FHIR, as I know, it is only in HealthShare, and it means that I still have to do lots of work and should make my version of this API for my needs.

So, question, is it not possible to get this part in Ensemble, because I am limited to use only it, and can't use HealthShare ?

Or maybe I should not use FHIR at all, and I'm going in wrong way ?

[#Ensemble](#) [#HealthShare](#) [#REST API](#)
