Support for Java Hibernate 5

Working on implementation FHIR to my project, I found interesting project HAPI-FHIR, which could help me to quickly launch my FHIR api server with InterSystems Caché as a storage, because this projects uses Hibernate to connect to database, as an example they use DerbyDB. I tried to change settings to use InterSystems Caché, but unfortunately it does not work and throw some errors inside HIbernate. As I found in Caché documentation, I have not some many options, I just have to set Cache dialect, and set database url. This projects uses Hibernate 5.1

Error which I get: DROP not supported as a after-use action for global temp table strategy

Maybe somebody faced this error too, and knows how to solve it?

#Compatibility #FHIR #Java #Caché
