Caché SQL error (ODBC?) - <<METHOD DOES NOT EXIST>Prepare+41^%SYS.SQLSRV *%New,%sqlcq

So just this morning we started to get this error from all of our SQL-client based tools that connect to our Caché SQL via ODBC:

[%msg: <Error instantiating cached query class in Prepare(): <METHOD DOES NOT EXIST>Prepare+41^%SYS.SQLSRV *%New,%sqlcq>] (State:S1000, Native Code: 190)]

No queries work... any help? stumped over here.

doing a SQL query via Class %SQL.Statement */

```
##class(%SQL.Statement
```

in Caché command line works... so that's why I think it's an ODBC issue..

I can't seem to find a SQLSRV class in the %SYS documatic

#Caché #SQL
