## [Solved]Reset the cursor of a Query (resultset)

Hello,

First sorry for my english :)

I'm looking for a solution to reset the cursor of a query in a csp page.

In my code I do:

```
<csp:query name="users" classname="UserId" queryname="Find">
  <csp:while condition="users.Next()">
    ...
  </csp:while>
```

And 100 lines after I have to do exactly the same ...

Is it a way to do the while without do the query again ?

Something like users.Reset() ??

Thanks a lot for your help

Sébastien
