Developer Community Update

Hi, Community!

We put in production the new DC update today. With this update we fixed some bugs, like publishing drafts with proper date and RSS fix and introduced the new look to the member page.

Now member's page consists of Posts, Comments, and Favorites: e.g. this is the page of [Alexander Koblov](#):

View	Mentions	Posts (19)	Comments (48)	Favorites (42)
----------------------	--------------------------	----------------------------	-------------------------------	--------------------------------

Manual editing of applicationHost.config in IIS to enable access to CSP Gateway Configuration page new

 CSP

Interesting anecdote I want to share. Not 100% Caché related, but I hope it would be useful.

On \$Sequence function

 Caché, Caché ObjectScript (COS)

In this article we are going to compare \$Increment and \$Sequence functions.

With this update you can see all the contributions and interests of your favorite author on DC.

Hope you like it!

Next weeks we prepare some new good updates! Stay tuned!
