Max function for the set of parameters

There is an interesting discussion in the [Russian forum](#) going.

What is the best solution for the function which returns the max for the set of parameters?

From the listed solutions I like this one:

```
ClassMethod max(args...) {
  for i=1:1:args {  s max(+$g(args(i))) = i }
  s i="", max=$o(max(i),-1, i) Q $lb(max, i)
}
```

It's great to see when Globals (or Locals in this case) are used in so elegant way.

Your variant?
