Connect Cache client to GT.M database

Does anyone know how to connect a Cache client to a GT.M database? I recently installed Osehra VistA on my PC and it uses GT.M, but we're supposed to use Cache Studio to develop. I tried adding a server to Cache (specifying 2222 as the port) and I get an "access denied" error. Port 2222 is the correct port which I use for for VirtuaBox and I have no problem connecting to VistA. I also tried going into the Management Portal to set up a local connection but this isn't working. There are some sites that say the products 'nodem' or 'node.js' are necessary, but I'm not sure how these fit in with Cache. Any assistance would be greatly appreciated!

Thanks!

Jeff
