Caché and Ensemble 2017.1 field test now available

I am pleased to announce the field test of Caché and Ensemble 2017.1, including many new improvements.

The product team at InterSystems looks forward to your participation in the field test and feedback over the coming months.

Some of the more significant changes in 2017.1 are the new RESTful APIs for iKnow, FIPS 140-2 validated cryptography for Caché database encryption, and improved DocBook search. As always there are a host of scalability and performance improvements to the core database and SQL. And hundreds of smaller improvements and corrections. Summary of the Caché changes can be found HERE and the Ensemble changes HERE.

Product management will be posting greater details how you can use the improvements in 2017.1 to improve your Caché and Ensemble based solutions.   Look for these postings in the next few days.

You can download the latest field test of 2017.1 HERE.

We welcome all your comments, questions and feedback.
