Monospace output from Zen

Hi,

I have a problem which i think has a simple solution but which i and others haven't yet cracked. I want to display text output to a text box in monospaced font. At the moment the style sheet is shown below, I have tried various other options such as specifying a specific font such as Courier New. None of the browsers I have tried (Safari, Firefox on OSX, IE) display as monospace, although the last 2 come close. I wonder whether I need a <pre> tag, but I can't see how to do that in Zen.

Suggestions?

```
XData Style
{
<style type="text/css">
/* style for title bar */
/* style for text box, non proportional (although in practice doesnt work)*/
#txaSPRINT {
  background: #C5D6D6;
  color: black;
  font-family: monospace, monospace;
  font-size: 1em;
  padding: 5px;
}
</style>
}
```
