At last! - Ability to Create Namespaces that are not Enabled for Ensemble - Coming in 2017.1

I'm pleased to see this in the documentation of the just-published 2017.1 Field Test of Ensemble:

"In certain circumstances, it is useful to create namespaces that are not enabled for Ensemble. In this release you can do this by clearing the [Make this an Ensemble namespace](#) checkbox when creating a new namespace. "

[#Ensemble](#) [#Release](#) [#System Administration](#)
