Ensemble Business Process receive Stream , how to push through RecordMapper

Hi, We have a business process that receives back a character stream that has csv content from a SOAP Operation call. I was hoping to make use of the record mapper to map the content to a record map to be able to process the transactions.

I only see examples/documentation of how to use a File or ftp business operation/service to map the stream to a record map.

Is this at all possible to get the csv stream into a record map batch object.

Regards

Thomas
