DB access from CSP page without creating link table

Hi all,
Basically i have 2 queries..

1.
   Is there any simple way to fetch the data directly from the database (using the URL and credentials) from the csp file without creating a link table for that particular Table...??
   If there is, could you please share the syntax of using them ..?

2.
   Can we have an object return type from the below mentioned method to a javascript function.. ???

#CSP #Caché
