Tip to look Atelier more mac stylish *only for Mac users*

I tried to make atelier look more like XCODE with this simple trick or tip: change the default font to SF Mono and size 14.

To do it I did:

1) Install SF Mono font in the system which is the default font for XCODE and needs to be installed in order to use it.
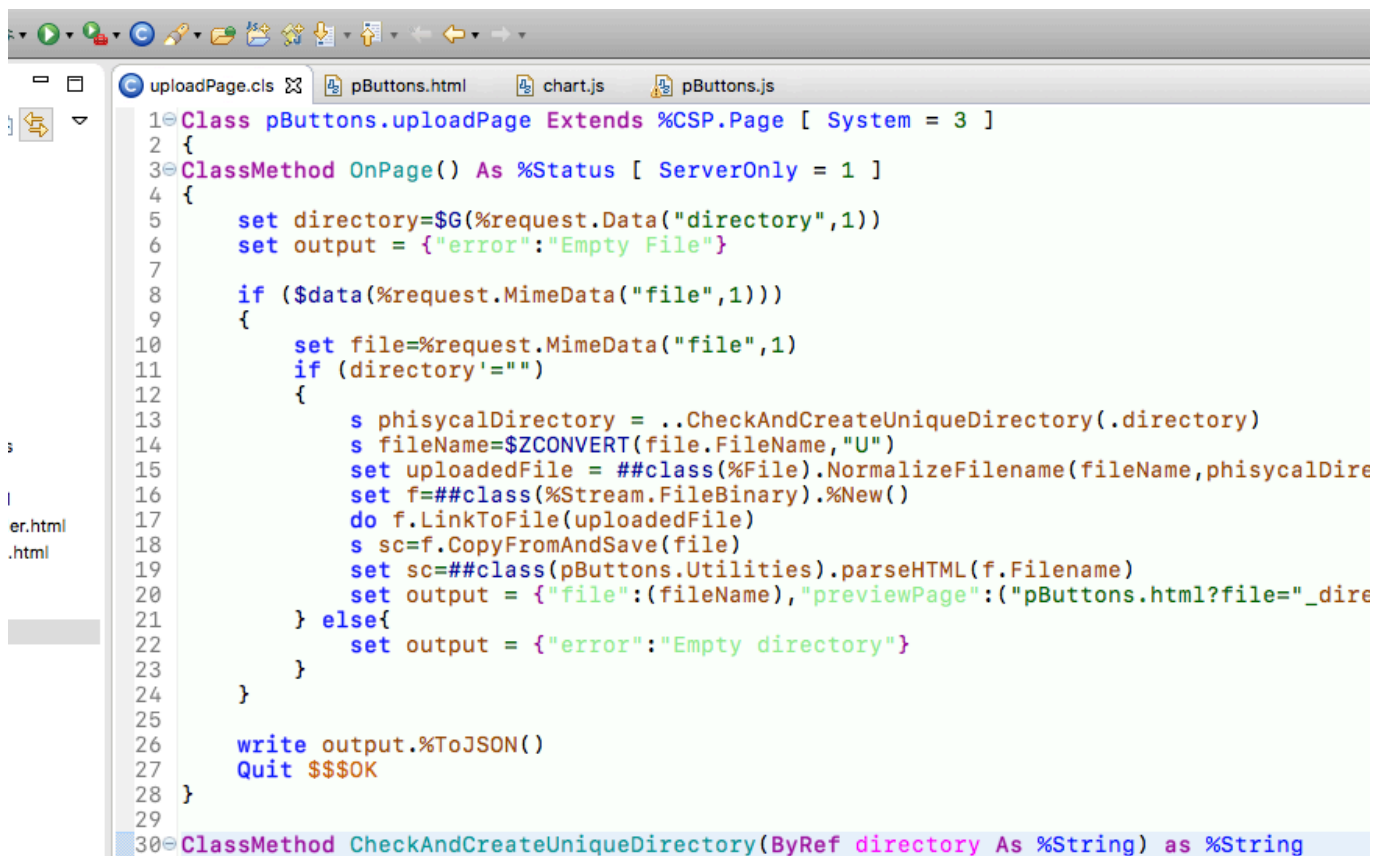

You can find it in: `/Applications/Utilities/Terminal.app/Contents/Resources/Fonts`

Double Click `SFMono-Regular.otf` file and install it. You will get a warning of "serious problems" but it will work all right.

2) Then, in Atelier, go to Preferences / General / Appearance / Color and Fonts. The choose Text Font (In Basics category) and Edit.. Search for Mono and change it to `SF Mono size 14`.

Regarding colors I preferred to keep the Atelier default ones which they seem fine to me, but of course you can change them to simulate XCODE completely.

See how it looks:

```
1 Class pButtons.uploadPage Extends %CSP.Page [ System = 3 ]
2 {
3 ClassMethod OnPage() As %Status [ ServerOnly = 1 ]
4 {
5     set directory=$G(%request.Data("directory",1))
6     set output = {"error":"Empty File"}
7
8     if ($data(%request.MimeData("file",1)))
9     {
10         set file=%request.MimeData("file",1)
11         if (directory'="")
12         {
13             s phisycalDirectory = ..CheckAndCreateUniqueDirectory(.directory)
14             s fileName=$ZCONVERT(file.FileName,"U")
15             set uploadedFile = ##class(%File).NormalizeFilename(fileName,phisycalDire
16             set f=##class(%Stream.FileBinary).%New()
17             do f.LinkToFile(uploadedFile)
18             s sc=f.CopyFromAndSave(file)
19             set sc=##class(pButtons.Utilities).parseHTML(f.Filename)
20             set output = {"file":(fileName),"previewPage":("pButtons.html?file="_dire
21         } else{
22             set output = {"error":"Empty directory"}
23         }
24     }
25
26     write output.%ToJSON()
27     Quit $$$OK
28 }
29
30 ClassMethod CheckAndCreateUniqueDirectory(ByRef directory As %String) as %String
```
