## ODBC issue

Hi All,

We are accessing the InterSystems's cache database via UNIX ODBC and displaying the data in PHP website . Recently we have upgraded the PHP version to 5.6. We are getting the nondisplayable characters ( ) for only strings. But the numbers and date fields are displaying correctly.

While querying the database via ISQL everything working fine (No Special characters).

I have looked around the internet and found the PHP 5.6 changed the default character to UTF-8.

For this issue anything, we can do from cache side.

cache version :

Cache for Windows (x86-32) 2016.1 (Build 656) Fri Mar 11 2016 17:59:39 EST

but we try both 8-bit and unicode cache.

Thanks,

Sansa.
