To access object property value, performance wise whats fast method ?

Lets say i have a record "Person". If i want to access the "Name" property of that object which one of the following best option performance wise

1. Option 1

```
set record = ##class(Test.Person).%OpenId(1)
```

```
write record.Name
```

2. Option 2

```
write ##class(Test.Person).NameGetStored(1)
```
