Accessing selfmade sys namespace csp class through normal namespace

Hi All,

I have SourceControl utility class as in sys namespace

```
Class %MW.Web Extends %CSP.Page { ... }
```

Previously with Cache 2010.1 and below there was no problem accessing it through

```
localhost:57772:/csp/myns/%MW.Web.cls
```

But now with newer version at least with 2016.2 I'll get Forbidden message from it.

With Web Gateway HTTP Trace Facility

```
GET /csp/ipanax2/%MW.Web.cls HTTP/1.1
```

```
--> HTTP/1.1 403 Forbidden
```

How can we make it accessible again?

Mikko
