Update several rows in SQL statement at Management Portal

Since now i have been working from external connection but i want to work with the SQL utility of Management Portal

i dont know how to do with several instructions like in other editors like this example

```
update Prod.Articulos set Alto = 1646, Ancho = 16, Fondo = 80 where CodigoNum = '100' and Empresa = 'CO'
update Prod.Articulos set Alto = 1646, Ancho = 16, Fondo = 400 where CodigoNum = '101' and Empresa = 'CO'
update Prod.Articulos set Alto = 1646, Ancho = 16, Fondo = 400 where CodigoNum = '102' and Empresa = 'CO'
```

it returns

```
ERROR #5001: 25: SQL ERROR #25: Input (UPDATE) encountered after end of query^
UPDATE Prod . Articulos SET Alto = ? , Ancho = ? , Fondo = ? WHERE CodigoNum = ? AND
Empresa = ?
UPDATE action = (parse) rtn = ( ) $ze = (<SYNTAX>errdone+2^%qaqqt) err = (qaqperr)
```

neither it works with a structure like this

```
UPDATE Prod.Articulos
  SET Alto = CASE CodigoNum
    WHEN '100' THEN 1646
    WHEN '101' THEN 1646
  END,
  Ancho = CASE CodigoNum
    WHEN '100' THEN 16
    WHEN '101' THEN 16
  END,
  Fondo = CASE CodigoNum
    WHEN '100' THEN 80
    WHEN '101' THEN 400
  END,
WHERE CodigoNum IN ('100','101')
```

perhaps you find it an easy trouble but i have tried all the ways i could and it is impossible for me.

thanks in advance.
