Server closed communication device?

I get this on some queries in some namespaces. For instance, this query:

```
SELECT TOP 10 SessionId, datediff(s,min(TimeCreated),max(TimeCreated)) as ResponseTime  
FROM ens.messageheader  
GROUP BY SessionId  
ORDER BY ResponseTime DESC
```

It works fine in HSBUS but in HSREG it throws the error.

Server closed communication device

Does anyone know what would cause this? Would it log something more useful somewhere?
