External monitoring of Ensemble and metrics

Internally we use splunk for monitoring applications and network.

Does Ensemble have a way of exposing internal metrics and/or a way of exposing custom built metrics?

I've used Deepsee dashboards in the past to monitor Apache Tomcat/Apache Camel/hawtio using JMX rest calls. This is the other way around and ideally I'd like to expose metrics on:

- HL7v2 messages (broken down into types)
- Production performance
- Error and Warning.

Understand Ensemble 2016.2 includes Java 8 JVM and was wondering if the JMX route (plus hawtio) is the way to do this?

Intercepting logging and exposing that in a splunk friendly format may be another option.

Many thanks

Kev
