## MDX Calculated measure help in DeepSee

I currently have an MDX query/calculated measure as per the below:

[DaysOnListRange].[H1].[DaysOnListRange].&[Days 91 - 180]+
[DaysOnListRange].[H1].[DaysOnListRange].&[Days 181 - 365]+
[DaysOnListRange].[H1].[DaysOnListRange].&[Days 365+]

however it currently doesn't sum when there is a blank in the data.
How can I amend this query to include empty cells/only sum cells with data?

I've tried using nonempty but it doesn't appear to work in this context
