## Using %Net.SSH.Session to do scp

Does anyone have a good example of using [%Net.SSH.Session](#) to do a scp copy of a file from one server to another? I tried calling `do $ZF(-1,"scp /ensemble/Scott/sr1.dat egate@inteng3:/home/egate/Scott/")` but did not have any success in getting the system to copy the file over to what I am calling inteng3.

Thanks

Scott
