How do I calculate the difference between two texts using iKnow?

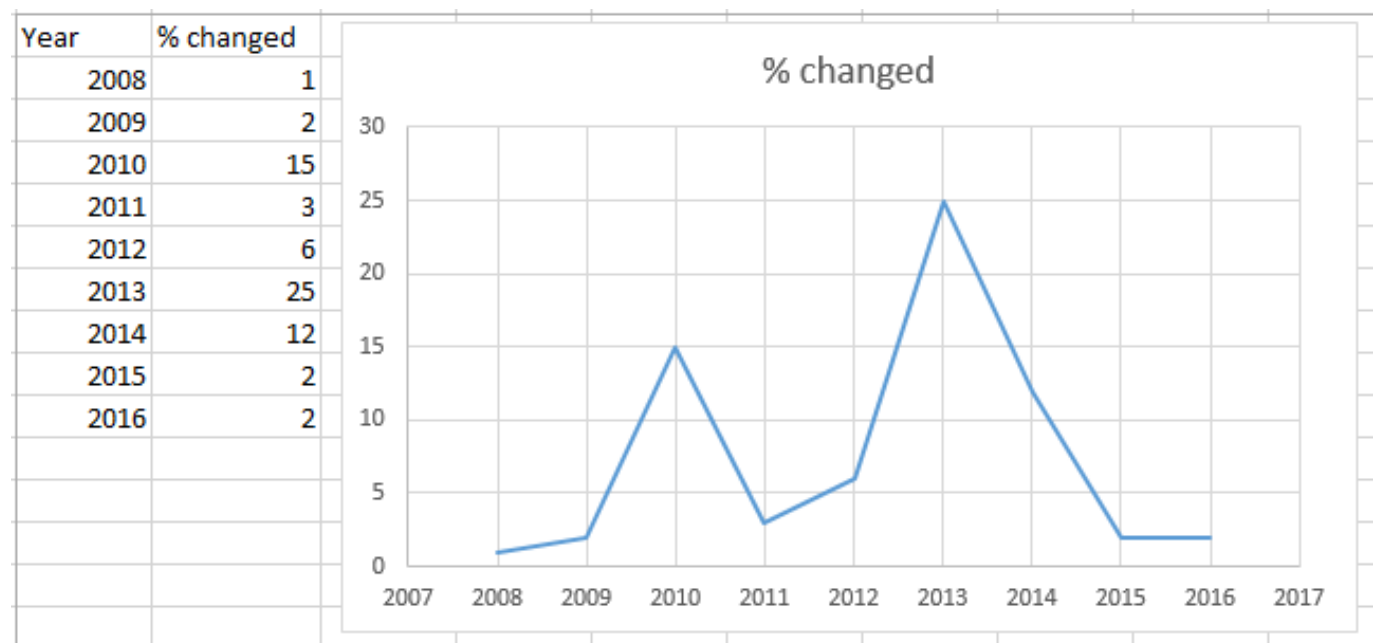

I'm in a process of acquiring a corpus of documents on educational courses.

For example there is an educational course called "OOP" and it can have documents from 2008, 2009, ... 2016 etc. And there are a lot of these courses, each one with programs from different years (hopefully)

So 1 document is 1 programm of one course for one year.

I want to calculate how much does a course changes per year.

Here's an example of information I want to get:

Can I get it via iKnow? How?
