January 10th DC Release: Mark an Answer as Accepted Answer

Hi Community!

In this release we turned off the digest mode for all the members (until it would be fixed) and fixed the Update notifications: now this settings can be found in the same place for all the members: Subscriptions/Content types tab.

Meet in this small release the new very valuable feature: marking answers as "true" answers.

If you are an author of the question now you can choose the right answer if there are more than one and mark it with the green checkbox. Like it is shown here:

The screenshot displays a forum interface. At the top, a question is posted: "I want to optimize the cube and delete the measure. Is there any easy way to find pivots which use it? Does anyone have any snippet regarding this? Would be great to have 'out of the box' dashboards which will show the dependencies of pivots vs measures and dimensions." Below the question, there are icons for thumbs up/down and a "Rating: 0" label. To the right, it says "Post by Evgeny Shvarov 1 day 10 hours ago" with social media sharing icons. Below the question, there is a "2 ★" rating and a link to "Add new comment". Underneath, it says "1 answer". A green checkmark icon is next to the word "ANSWER". The answer text reads: "You can search for the references in studio: 1. Open Studio 2. Menu -> Edit -> Search in files o Find: Dimension/Measure (for example [DateOfSale].[Actual].[DaySold]) o File type: *.dft It should find relevant entities." Below the answer, there are thumbs up/down icons and a "Rating: 0" label. To the right, it says "Eduard Lebedyuk 1 day 6 hours ago". At the bottom of the answer, there is a "2 ★" rating, an "edit" link, and a link to "Add new comment". On the right side of the forum post, there is a sidebar with a "LINK" section containing "Try In Contr", a "RELA" section with "Weigl" (0 comments), "Is it p class:" (0 comments), and "Deep:" (1 comment). Below that, there is another "RELA" section with "Atellie" (0 comments), "Atellie" (0 comments), "Next:" (0 comments), and "Dashl" (0 comments).

If there are more than one answer, the "true" one will be shown topmost.

The question for the Community: what should we do with the Unanswered filter? Now it works as a filter for the questions without any answer. Should we keep it as it is, or change its behavior to filter questions without "True" answer?
