EDI 837 Parsing

I wanted to parse an EDI 837 X12 document to extract a value from CLM segments. We tried with the below DTL and did not get it working. Appreciate any ideas.

```
<transform sourceClass='EnsLib.EDI.X12.Document' targetClass=
'Test.Request.EDIX12ClaimSegments' sourceDocType='HIPAA5010:837I' targetDocType=
'HIPAA5010:CLM' create='new' language='objectscript' >
<assign value=
'source.{loop2000A().loop2000B().lo
op2300().CLM:ClaimSubmittersIdentifier}' property='target.ClaimInvoiceNo' action='set' />
</transform>
```
