ERROR #6085: Unable to write to socket with SSL/TLS configuration

I have 2 instances of Cache, one of 2010 and the other 2016. On both I have created a SSL Configuration with same name.

When I connect to a SOAP Service Client from Cache 2010, I get the above error.

If I connect from Cache 2016, the connection get through.

How can get more details of the error in the Cache 2010 instance to be able to fix this issue.

I have enabled the SOAP Log and it does not give much of details.

Regards

Anil
