## <ILLEGAL VALUE> when trying to call \$ZF("GETFILE") on OpenVMS

Per the information at <http://docs.intersystems.com/latest/csp/docbook/DocBook.UI.Page.cls?KEY=...> I am trying to use a call to \$ZF("GETFILE") to obtain information about an OpenVMS file. But I get an <ILLEGAL VALUE> error.

For example:

```
w $zf("GETFILE",filename,"UIC")
```

reports:

<ILLEGAL VALUE>

My filename variable contains the full path and name of a file that I own. I hold the %All role in Cache.

This is 2012.1.5 on OpenVMS/IA64 V8.4

Any ideas what's going wrong?
