SQL with 2 columns in where condition

I'm having trouble creating a view in cache with query like:

```
SELECT column1, column2, column 3
FROM table
WHERE
(column1, columnn 2) IN (SELECT c1, c2 FROM table2 GROUP BY c1)
ORDER BY column1
```

I think the problem is in where clause, because it cannot take two columns .

the exact error: [SQLCODE: <-1>:<Invalid SQL statement>] [%msg: <) expected, , found^ (column1,>]

Any idea on how to solve this?

Thank you.
