Ensemble 2014.1.5 - Soap Business Service -ERROR <Ens>ErrBusinessDispatchNameNotRegistered: Business dispatch name 'EnsLib.SOAP.GenericService'

I am following the ESB tutorial(<https://learning.intersystems.com/course/view.php?id=77>) and using my local system(2014.1.5) windows 7. I click the button on SoapUI for the Weather piece (<http://127.0.0.1:57774/esb/soap/Weather/GlobalWeather.asmx>) and get the response of <text>ERROR <Ens>ErrBusinessDispatchNameNotRegistered: Business dispatch name 'EnsLib.SOAP.GenericService' is not registered to run</text>

checked the Event Log :

ID:	116
Type:	Error
Text:	ERROR <Ens>ErrBusinessDispatchNameNotRegistered: Business dispatch name 'EnsLib.SOAP.GenericService' is not registered to run
Logged:	2017-02-03 12:38:51.844
Source:	(none)
Session:	(none)
Job:	12380
Class:	Ens.Director
Method:	CreateBusinessService
Trace:	(none)
Stack:	<ul style="list-style-type: none">• \$\$^zGetErrorTrace+3 ^Ens.Util.Trace.1 +1• DO^zLogNoTrace+10^Ens.Util.Log.1 +1• DO^zLog+2^Ens.Util.Log.1 +1• DO^zLogStatus+4^Ens.Util.Log.1 +1• \$\$^zEnsError+2^Ens.Util.Error.1 +1• \$\$^zCreateBusinessService+12 ^Ens.Director.1 +2• DO^zOnPreSOAP+8^EnsLib.SOAP.Service.1 +1• \$\$^zOnPage+31^%SOAP.WebService.1 +1• \$\$^zPage+10^%SOAP.WebService.1 +2• DO^CSPDispatch+718 ^%SYS.cspServer +2• DO^CSPDispatch+569 ^%SYS.cspServer +1• DO^zProcessRequest+1 ^%CSP.Session.1 +1• DO^Request+535^%SYS.cspServer2 +1• DO^Request+21^%SYS.cspServer2 +1• DO^zProcessRequest+1 ^%CSP.Request.1 +1• DO^css+36^%SYS.cspServer2 +

I checked the namespace for DispatchName and found:

```
^Ens.Runtime("DispatchName","Ens.Alarm")="Ens.Alarm"
^Ens.Runtime("DispatchName","Ens.MonitorService")="Ens.MonitorService"
^Ens.Runtime("DispatchName","Ens.ScheduleHandler")="Ens.ScheduleHandler"
```

```
^Ens.Runtime("DispatchName","Ens.ScheduleService")=
"Ens.ScheduleService"
^Ens.Runtime("DispatchName","Weather")="Weather"
^Ens.Runtime("DispatchName","Weather BO")="Weather
BO"
^Ens.Runtime("DispatchName","Weather
BPL")="Weather BPL"
^Ens.Runtime("DispatchName","Wikipedia")="Wikipedia"
^Ens.Runtime("DispatchName","Wikipedia
BO")="Wikipedia BO"
^Ens.Runtime("DispatchName","Wikipedia
BPL")="Wikipedia BPL"
```

Can someone give me pointers on where to look for configuration issues?
