Monitor and alerts in Ensemble

Hi,

We want to monitor an Ensemble Production and send custom email alerts in function of some Rules. For example, if we normally receive 1 message per second, if suddenly we receive 5 or more messages per second, we want to send an email alert. And if tomorrow we don't want to check this again, we want to disable it through Ensemble Business Rules.

We first thought in using queries in Ens.MessageHeader table, filtering by date and SourceConfigName, but we have heard that exists the Activity Monitor in Ensemble.

We have enabled it in a production, and the DeepSee dashboard works fine, but how can we programe alerts? How can we enable/disable alerts? Is there anyway to do this?

Thank you in advance.
