## How do I disable cache for static files in web application

I have a web application with html, css, js files (no ZEN/CSP).

Problem: after I update them on a server, Caché still servers old and cached version (browser Cache is disabled).

There is a manual cache purge in Gateway Settings, of course, but is there an automatic solution?

I'll be okay with disabling cache server-wide, but an application-wide solution would be better.

I don't want to host web app on a separate web server.

Here's my web app config:

Edit definition for web application /dsw:

General Application Roles Matching Roles

Name   
Required. (e.g. /csp/appname)

Description

Namespace  Default Application for MDX2JSON: /dsw  Namespace Default Application

Enabled  Application  CSP/ZEN  Inbound Web Services
