Connecting using factory

The following code in .Net using CacheObject.dll version 2016.1.2.206 com library

```
ConnectionString = "cniptcp:10.56.135.160[1972]:PHDEMO:PHSYSADM:*****"
```

```
b = factory.Connect(ConnectionString )  
objCacheObject = factory.Static("CacheObjectConnection")  
clist = factory.GetConnectionList()
```

for the above code, b is true and clist is Local,cniptcp:127.0.0.1[1972]:

Why isn't the 10.56.135.160 in the connection list? Next the program runs a function written an early version of Cache. This function returns NULL. Are the early versions compatible?
