Write files to different directories with from one EnsLib.File.OutboundAdapter

I have one Ensemble EnsLib.File.OutboundAdapter which has several methods, each writing a different file. In my Ensemble Production I have configured this FileAdapter to write to a certain directory, but i'd rather have each method write to a different (sub)directory instead of writing all files to the same directory. How can I achieve that without splitting the methods into different business operations?

The current code just sets the filename and the output:

```
set tSC = ..Adapter.PutString(filename,output)
```

[#Business Operation](#) [#Ensemble](#)
