## Caché and Ensemble 2017.1 Release Candidate

I am pleased to announce that Caché and Ensemble 2017.1 Release Candidate versions are now available for all platforms.

We appreciate the many customers who have downloaded, tried it, and given us feedback over the past few months.

Some things not in the original field test that you may want to check out include:

- Ubuntu is now a full production platform.
- OpenID Connect now supports JWKS with OpenID Connect Discovery and OpenID Connect Dynamic Client Registration.

There have been over 300 additions and corrections since the beginning of Field Test. So if you haven't looked at a recent version, I encourage you to do so now. You can find details about all the changes on the download page noted below.

We anticipate General Availability of this release in March.

You can download the latest release candidate of 2017.1 [HERE](#).

We welcome all your comments, questions and feedback.
