InterSystems GitHub Topics

Hi!

Recently GitHub introduced [topics](#) for the projects.

So you can change your InterSystems related projects introducing the topics to let it be categorized, more visible and searchable. Here is the list of good examples for your projects (some of them are clickable already):

[intersystems](#) , [intersystems-cache](#) , [intersystems-ensemble](#) , intersystems-healthshare, healthshare, [intersystems-iknow](#), iknow, [intersystems-deepsee](#), deepsee, cache-objectsript, csp, intersystems-zen, zen.

If you have any good ideas for topics or already using something, please introduce it here in the comments?

Better with a working link.

Thank you in advance!
