How to Change Redirect Url in OAuth2 implementation?

I tried to implement the Oauth2 in google,

I got authentication, But I unable to read response class.

I got an error as:

I unable to change response Class.

How to Change Redirect Url in OAuth2 implementation?

Published on InterSystems Developer Community (<https://community.intersystems.com>)

Menu

Home | About | Help | Logout

System > Security Management > OAuth 2.0 Client Configurations > Client Configurations > Edit OAuth 2.0 Client Configuration

Edit: Google

Server: 5R8LMC2 Namespace: %SYS
User: Admin Licensed to: Cache Evaluation Instance: TRYCACHE

Save

Cancel

Use the form below to edit an existing OAuth 2.0 client configuration for server <https://accounts.google.com/o/oauth2/auth>:

Application name

Google

Required.

Description

Simple OAuth Integration

Enabled

☒

Client Type

☒ Confidential ☐ Public ☐ Resource server

SSL configuration

Google ▾

Required.

Client redirect URL

The client URL to be specified to the authorization server to receive responses.

<https://localhost:57773/csp/sys/oauth2/OAuth2.Response.cls>

Use TLS/SSL

☒

Host name

localhost

Required.

Port

57773

Prefix

Authentication type

☒ none ☐ basic ☐ form encoded body

Anyone help me to Change response Class in Client Configuration

or

Is there any option to define response URL manually?

Thanks
