How to filter two widgets in DeepSee NewWindow command?

Hi!

There is a 'Newwindow' control in DeepSee Widget which opens the page in a new tab in a browser with a given URL.

With the help of this control you can open another dashboard and supply some parameters in SETTINGS clause.

Consider I can setup in Dash1 the URL like:

```
_DeepSee.UserPortal.DashboardViewer.zen?DASHBOARD=Postings.dashboard&SETTINGS=TARGET:W1;FILTER: [Author].[H1].[Author].%26[$$$VALUELIST]
```

to filter the widget W1 in Postings dashboard with filter [Author].[H1].[Author].%26[\$\$\$VALUELIST], where \$\$\$VALUELIST is some value from the listing in a widget in Dash1 .

How can I spread the filter for two or more widgets?
