## Journal file I/O error

One of my journal spaces has status "IOER" in MSM MUMPS.

I think this is happend during system freeze.

23	FULL	150	2,142,284	373	2	2	0	100.0
	File name=J3170318.003							
24	IOER	150	0	0	0	0	0	0.0
	File name=J3170318.004							
25*	ACTIVE	150	72,436	14,755	74	74	0	4.5
	File name=J3170318.005							

I never seeing a journal file status like that. I did not find anything about it in the intersystems documentation.

I can simply delete the damaged file, but I'd like to know how to prevent this from happening.

Anyone have some idea about it?

My MSM-UNIX Version is 4.4.0.

Thanks
