Atelier Auto Indentation (Or lack thereof?)

Is there some setting I'm missing with Atelier when it comes to auto indentation or something not supported yet? I noticed that it won't set the correct indentation when it comes to closing curly braces, as well as no auto indentation when I go to the next line after a beginning curly brace. If it's not something currently supported, is there any ETA on this?

IE This is what Atelier does:

```
Method blah(param1) as %Status {  
  Try {  
  }  
  Catch Exception {  
    // blah  
  }  
  
}
```

This is what Cache studio does:

```
Method blah(param1) as %Status {  
  Try {  
    // blah  
  }  
  Catch Exception {  
    // blah  
  }  
}
```

Any help would be greatly appreciated!

Thanks,

- Chris
