## problem with Mirroring

Hello, Thanks in advance for all replies. I have been practicing setting up mirroring between two development servers in preparation for mirroring our production server in a few weeks. I started by setting the servers up with minimum security which worked easily, then I set it up in lock down mode again without any issues. Now I am setting it up in lockdown mode with encryption and this one is testing me. I have everything setup but my async dr member cannot connect to the primary.

from cconsole.log

```
3/23/17-10:09:39:851 (3124) 0 [SYSTEM MONITOR] Mirror status changed. Member type = Not Member, Status =
03/23/17-10:11:17:095 (3496) 0   Loaded mirror set member: CORPARTAPP2/CACHE
03/23/17-10:11:17:095 (3496) 0   Loaded mirror set member: CORRARTAPP1/CACHE
03/23/17-10:11:17:130 (3612) 0 Mirror manager for BILLSMIRROR starting
03/23/17-10:11:19:046 (3612) 2 Async member for BILLSMIRROR started but failed to connect to primary
03/23/17-10:11:42:133 (3124) 0 [SYSTEM MONITOR] Mirror status changed. Member type = Disaster Recovery,
Status = Waiting
03/23/17-10:13:01:571 (3496) 2 Could not open mirror journal log to read checksum, errno = 2
03/23/17-10:13:01:571 (3496) 0 Building mirror journal log file d:\intersystems\cache\mgr\mirrorjrn-
BILLSMIRROR.log
03/23/17-10:13:01:587 (3496) 0 Built mirror journal log file d:\intersystems\cache\mgr\mirrorjrn-BILLSMIRROR.log
successfully.
```

status for mirror on async member is WAITING.
