Something wrong with the DC feedback

I just clicked on the link "Contribute feedback about this site" and was brought to the feedback group

<https://community.intersystems.com/group/developer-community-feedback>

However all the issues that have been logged are now gone. Were they all fixed?

All that is there is some year old posts about winning a pass to global summit 2016. They should not be in this feedback group.

Also the button to "create a new post" is gone from this page.

I wonder if this post will appear in the feedback group?
