# Javascript exception

Hi community,

I do not understand why I get a 'javaScript exception'?

Purpose is to search for a [Country] based upon a [Code] as search parameter.

this is my code:

```
<hgroup>
<text id="CountryID" name="Code" label="Code" size = "8" />
<spacer width="5"/>
<text id="CountryName" name="CName" label="Country" size = "24" />
</hgroup>
<spacer height="5"/>
<button caption="Search" onclick="zenPage.searchValue();"/>

</page>
}
```

```
ClientMethod searchValue() [ Language = javascript ]
{
var ctrl = zen('CountryID');
tVar = ctrl.getValue();
alert (tVar); ///test-show text value
zenPage.sqlTest(tVar);
}
```

```
Method sqlTest(tVar) [ ZenMethod ]
{
SET InVal = tVar
&sql(SELECT Countrie
      INTO :OutVal
      FROM ZenCrm_Data.Countries
      WHERE CountrieCode=:InVal)
IF SQLCODE'=0 { SET OutVal="?"
  IF OutVal="?" {
    WRITE !,"No data returned"
    WRITE !,"SQL error code ",SQLCODE } }
ELSE {
  WRITE !,"Name is: ",OutVal}
}
```

Does the method needs a 'Return' statement ore something?

Can somebody explain please? this might help me with other programming issue's to!

Thanks in advance,
