Chatbot for Cache instance control.

Dear *InterSystems Community*! Do you control your Caché or Caché controls you?

Recently, I decided to start the project about **control of Caché** instance. **The control is based on communication with chat bot**.

For example, below text message shows current *statistics* of the certain Cache instance.

/stat <cache-instance>

Another example (*start* the certain Caché instance).

/start <cache-instance>

One more example (*stop* the certain Caché instance).

/stop <cache-instance>

What do you think about the project? What do you think about additional functionality?

Please, feel free to share your thoughts.

UPDATE (from comments).

0. Clone instance.

/clone <cache-instance>

1. View list of Caché instances.

/list

2. Request for the status of license usage.

/license

3. Request for the status of freespace and CPU load.

/system

4. Restart the server or some services (e.g. restart the CSP Gateway).

/restart <cache-instance or server or services>

5. Get push messages for severe alerts

/push

#Caché #Management Portal
