Count Number of Pages?

Hello,

We are working on creating a metadata file to accompany PDF documents produced by one of our third party systems for ingestion into our DMS. One of the pieces of data that the metadata file must contain is the number of pages of the PDF document.

In Cache ObjectScript does anybody know if there is currently a way of counting the number of pages within a file (specifically a PDF) without invoking a non-Caché ObjectScript program/function from within Caché ObjectScript?

If we have to invoke a non-Caché ObjectScript program/function from within Caché ObjectScript then we will but we wanted to ensure that there wasn't a function within cache that can perform this (we can't seem to find one so suspect that currently there is not)?

Thanks

John
